

rxTools

-with Pasta-

Quick start Guide

1

Run *tools/cdn_firm.py*.

On Windows, you need to install **Python** first.

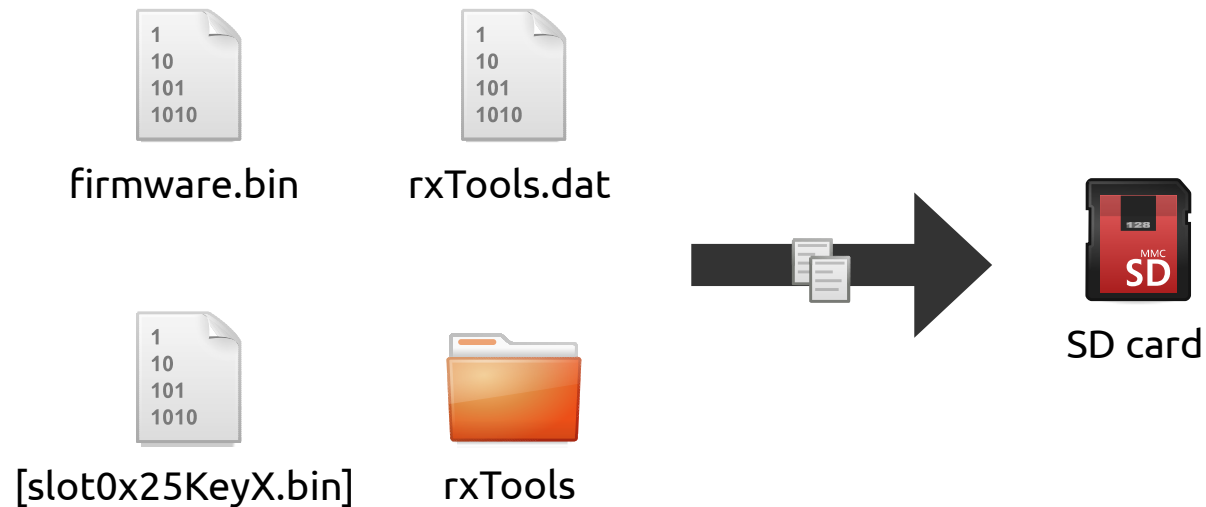

cdn_firm.py

On GNU/Linux and OS X, open a Terminal, type, without quotes, “python “, then drag&drop the file there and press Enter.

NOTE: You need to unblock updates in order to download the firmware from the CDN.

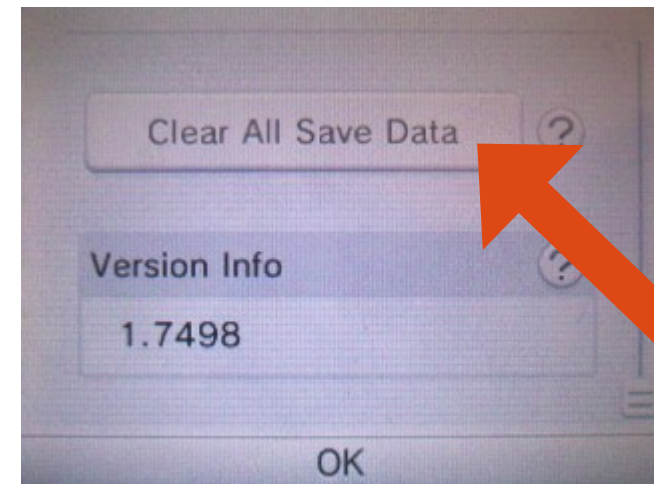

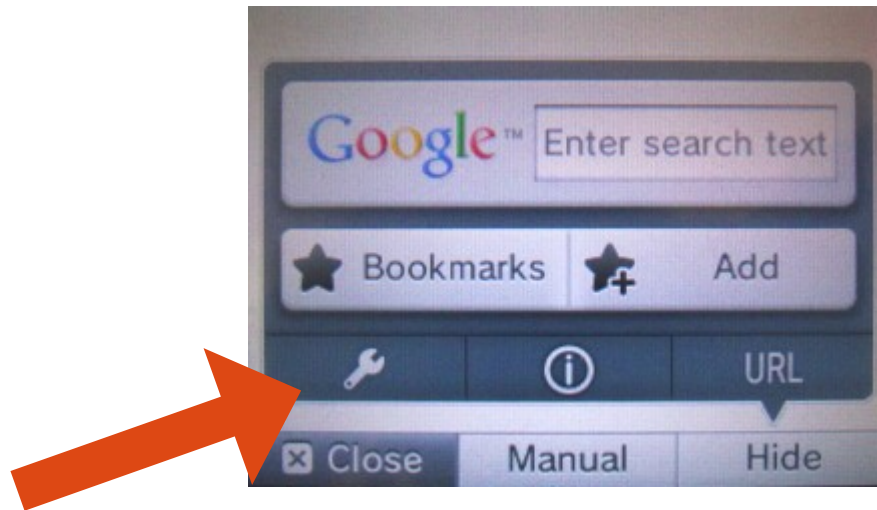

2

Copy *rxTools.dat*, *firmware.bin*, *slot0x25KeyX.bin* (optional) and the *rxTools* folder to the *SD card*.

NOTE: If your firmware version is 8.0 or higher, you don't need *slot0x25KeyX.bin*.

3 Open the browser settings and select *Clear All Save Data*.

4 Turn off Wi-Fi and go to the URL *http://launch.rxtools.net*. Close the browser, turn on Wi-Fi and open the browser again. The next time you open the browser, it will load rxTools automatically.
